EDUCATION

Birla Institute of Technology and Science (BITS Pilani)

BSc. Computer Science · Student ID: 2025EB01872

Pilani, India

Sep. 2025 – Present

NxtWave Institute of Advanced Technologies (NIAT)

Industry-Focused Software & AI Engineering

Hyderabad, India

2023 – Present

EXPERIENCE

Open Source Developer / Contributor

Mar. 2026 – Present

RUXAILAB (GSoC Initiative)

Remote

- Authored core stability patches and infrastructure refactors under the "Spring Cleaning the Code and Strengthening the Safety Net" initiative.
- Optimized code to prevent runtime crashes and enhanced architectural safety nets to support large-scale open-source scaling.

PROJECTS

Mizune | Electron, Three.js, VRM, Python, FastAPI, WebSocket, Gemini AI

Mar. 2026 – Present

- Built a desktop app with a floating transparent 3D anime character (VRM) rendered via Three.js inside Electron, with a frameless always-on-top window.
- Engineered a Python/FastAPI WebSocket backend integrating Gemini AI for responses and Edge TTS with SQLite audio caching for low-latency voice synthesis.
- Implemented global hotkey voice activation, speech recognition, and desktop automation commands (Spotify, browser search) parsed from voice intent.

Mind Universe | Next.js, TypeScript, Tailwind CSS, Netlify

2026

- Built a full-stack web platform in Next.js with a modular component and sections architecture, deployed on Netlify with continuous integration.
- Integrated AI-driven features using an agent-based design, enabling intelligent interactions within the platform.

RescueWing | Pixhawk, Raspberry Pi 4, YOLOv8-nano, MAVLink, ArduPilot

Jan. 2026

- Built a 450 mm quadcopter with Pixhawk FC and Raspberry Pi 4 running YOLOv8-nano for real-time aerial survivor detection in flood disaster scenarios.
- Programmed MAVLink-based autonomous waypoint navigation with a lawnmower search pattern via ArduPilot SITL simulation and Mission Planner.
- Designed a multi-agent software brain (Perception, Decision, Communication) for autonomous SAR operations; presented at Makers Conclave 2026.

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Tools: React, Next.js, FastAPI, Node.js, Electron, Tailwind CSS, Git, Docker

AI: Stable Diffusion, YOLOv8, Edge TTS, Multi-Agent Systems, RAG, Generative AI Workflows, Agent Orchestration, Prompt Engineering

Vision: MediaPipe, Blender, Three.js, VRM, WebGL
